Introducing Pellevé®

Pellevé® is a revolutionary innovation for smoother, tighter skin... FDA-cleared to treat facial wrinkles without surgery.

With Pellevé®, you can look and feel refreshed, naturally.

Pretreatment

180 Days Post Single Treatment

Put a fresh face forward

Pellevé® precisely heats the deep layers of your skin using advanced radiofrequency technology without damaging the epidermis, or top layer. The heat causes the collagen in your skin to contract and tighten. After the treatment, your skin will start to produce new collagen. The result is an improvement in skin quality, firmness and tightness you can see and feel.

Pellevé® can be used to treat the skin on the face, including:

- Sagging skin under the chin
- Nasolabial folds
- Wrinkles around the mouth
- Lines or folds between the eyebrows
- Lines on the forehead
- Excess skin on the upper eyelid
- Crow's feet

Results you can see in just a few treatments

Many people start to see results immediately after just one Pellevé® treatment. Your doctor will recommend the right number of treatments for you.

Frequently asked questions

Q: How is Pellevé® different from other skin tightening treatments?

A: Pellevé® has been proven to provide safe and effective skin tightening in medical studies. Because Pellevé® is a non-invasive procedure, meaning no surgery is required, there are minimal side effects and discomfort. Unlike other systems, no anesthesia or skin cooling is needed during your Pellevé® procedure, so you can return to home or work immediately following treatment. Talk to your doctor to see if Pellevé® is right for you.

Q: What should I expect during the procedure?

A: You will feel a deep warming sensation each time the Pellevé® handpiece touches the area being treated. Because no anesthetic is required, you'll be able to describe the depth of the feeling to your doctor, which will help to ensure the best possible results.

Q: How long does a Pellevé® procedure take?

A: Your Pellevé® procedure will typically take about 45 to 60 minutes for a full facial treatment. Because Pellevé® doesn't require anesthesia or downtime, it fits easily into your busy schedule.

Frequently asked questions

Q: What should I expect afterwards?

A: You should expect to be able to return to your daily activities with no downtime at all. There is no restriction from being in the sun and you can also apply makeup immediately after the procedure. Some patients experience mild swelling and redness which typically go away within 2 to 24 hours.

Feel refreshed.

For the best results, it is important to choose a doctor who is experienced in administering Pellevé®.

Talk to the healthcare professional that takes care of your skin, or **VISIT www.pelleve.com** to locate a doctor near you.

Pellevé® is indicated for the non-ablative treatment of mild to moderate facial wrinkles for certain skin types. Possible side effects of Pellevé® are usually treatment-site related and include mild discomfort during the procedure localized within the treatment area. Mild swelling (edema) and redness (erythema) may occur during or after a radiofrequency skin treatment. Initial studies of Pellevé® Wrinkle Treatments have reported that erythema typically resolved within 2 to 24 hours after treatment.
