

“Pellevé™ is a skin rejuvenation treatment that offers an attractive option to my patients who are interested in subtle but real results without the discomfort, expense or downtime of some of the skin tightening technologies currently available. The versatility of this device and its ability to successfully meet our patient’s aesthetic demands make it a popular anti-aging treatment.”

Dr. Steven Dayan
Facial Plastic Surgeon
Chicago, USA

“I have found Pelleve RF non-invasive treatment for fine lines, especially in the crow’s feet area, to be well tolerated and effective, especially when done as a series. There is almost no downtime as patients can go out in public within 2 hours.”

“Pelleve is also effective in post surgical facelift patients, especially those in need of minor skin tightening or skin quality improvement. Patients looking for skin quality and skin tightening with no discomfort have been satisfied with Pellevé.”

Dr. Miles Graivier
Plastic Surgeon
Atlanta, USA

“The Pelleve unit does not require much space in the clinic. The procedure is so easy that many physicians let their nurses do it, although I personally treat all of my Pelleve patients. The vast majority of the patients have demonstrated improvement in wrinkle reduction for glabellar fold, crow’s feet, softening of the naslabial folds and tightening of the cheek contours.”

Reynaldo M. Javate, M.D., F.I.C.S.
Chief, Lacrimal, Orbital and Oculofacial Plastic Surgery
Manila, Philippines

“Pelleve does not have the discomfort associated with some other skin tightening therapies. My patients love the treatment. They get effective results without the downtime associated with other skin rejuvenation procedures.”

Dr. Z. Paul Lorenc
Plastic Surgeon
New York City, USA

“The results Pellevé offers for the eyes I cannot really get with any other device. Nothing compares to it for the eyelid area because the tip is finer and more delicate. Pellevé is something that will tighten skin, make the skin look better and make the patient look more youthful. In my practice, 95-98% of the time, my patients will see an immediate improvement. There appears to be a cumulative effect so I recommend two to three treatments most of the time. You can see when they smile that the crow’s feet are less noticeable.”

Dr. Flor Mayoral
Dermatologist
Miami, USA

“Our patients absolutely love Pellevé. Some of the comments we’ve heard are that they find it to be very relaxing and rejuvenating. Patients who are especially fearful of surgery or other painful lasers feel very comfortable with this procedure. And so far, everyone has said they’ve seen a true tightening of the skin and a more youthful appearance; which is no surprise because in actuality, Pellevé rebuilds the collagen in the face and tightens the elastin layer.”

Dr. Phil Miller
Facial Plastic Surgeon
New York City, USA

“Patients’ expectations are ever-increasing and until I discovered the benefits of Pellevé, there was nothing on the market to help achieve the results our patients have become accustomed to in the delicate eye area. The tip is perfect for the eyelid and under-eye. Pellevé is also great for the fine lines on the top lip. Results are very quick and patients love that – especially those that have big functions to go to soon after treatment.”

Dr. Rita Rakus
Dermatologist
London, UK

“Pellevé is a great option for women who don’t want to have surgery, but do want to feel better about how they look,” said Dr. Deborah Sarnoff, one of New York Magazine’s 2010 “Best Doctors”. “Pellevé offers natural results with a single one-hour treatment, and they can go right back to work or out that night.”

Dr. Deborah Sarnoff
Dermatologist
New York City, USA

“With continuous RF heating customized to each patient’s need, I can assure my patients that they will see immediate and progressive improvement with virtually every treatment.”

Dr. Michael Stampar
Facial Plastic Surgeon
Punta Gorda, USA
